

[Paris, 31 March 2021 – Press release]

Mobility recharge with new energies: FillnDrive with a new governance to accelerate growth

- Bertrand JOUBERT joins FillnDrive as partner and Chief Operating Officer. He brings 15 years of experience in the mobility industry, as well as a demonstrated track record in structuring and developing high-growth companies.
- He will manage the company alongside Laurent ROUVET, founder and Chief Executive Officer, who will keep his active contribution in steering the product roadmap and guiding the development teams.
- FillnDrive, the software development company that facilitates recharging with new energies, aims to double its territorial presence to equip more than 50 recharging stations by the end of 2021.

Two years after its creation, the software development company FillnDrive engages a new step in its development with the recruitment of a Chief Operating Officer, in charge of overseeing all operations to support the company's growth: business development, partnerships, strategy and finance. Bertrand JOUBERT has more than 15 years of experience in the mobility industry, within Renault then RolandBerger, and most recently with Symbio where he managed the company's Sales, Marketing and Strategic activities. He graduated from Ecole Polytechnique (X-02) and holds a Master's degree in Innovation Management from X-HEC-Telecom (PIC-06).

Laurent ROUVET and Bertrand JOUBERT form once again a tandem initiated in 2015 during the first deployments of telematics stations and Hydrogen vehicles within the framework of the HyWay program in Auvergne Rhône Alpes.

Laurent ROUVET, FillnDrive CEO: « *The activity of the company started off rapidly, with customer projects engaged since the very first days of the creation. Given the strong growth of the market, I wanted to strengthen the structure of FillnDrive and give it the capacity to pursue its development. From his experience, I know Bertrand will get us address every aspect of this challenge, and I am delighted to be working with him again in this perspective.* »

Bertrand JOUBERT, FillnDrive COO: « *I am deeply honored by the trust Laurent and FillnDrive co-founders have granted me. I measure the progress achieved by the company since its creation, and the resilience of its business model, with growth confirmed for the 2020 financial year. We have solid development prospects in the digitalization of mobility recharge across Europe and beyond, for both hydrogen and natural gas, and a team that is passionate about its product - all of these assets will enable us to reach our target of 50 equipped stations by the end of 2021.* »

About FillnDrive

FillnDrive facilitates mobility recharging with new energies (hydrogen, natural gas, electricity). Software development company, FillnDrive handles a set of cloud solutions that digitalizes all operations, from point of sale management to infrastructure supervision. Compatible with a large majority of stations, this solution makes the driver experience more fluid and allows each player in the recharging process to optimize the management of its activities: mobility operators, vehicle fleet managers, and station operators. FillnDrive, founded in 2018 and based in Paris, is an independent company owned by its management.
